

Report of the Office of the Revenue Commissioners

Analysis of High Income Individuals' Restriction 2011

1. General

The 2006 and 2007 Finance Acts introduced, with effect from 1 January 2007, measures to limit the use of certain tax reliefs and exemptions (known as 'specified reliefs') by high-income individuals. Such individuals, by means of the cumulative use of various tax incentive reliefs, had in previous years substantially reduced their tax liabilities.

The overall objective was to ensure that, from 2007, individuals with an adjusted income¹ of **€500,000** or more (where the full restriction applied) would pay an effective rate of tax of approximately **20 per cent** on a combination of adjusted income and ring-fenced income. The restriction began to apply where an individual's adjusted income exceeded €250,000 and a full restriction applied where an individual had adjusted income of €500,000 or more. As previously reported, that objective was achieved in 2007, 2008 and 2009

The 2010 Finance Act introduced further limitations on the use of specified reliefs which took effect from 1 January 2010. These limitations were designed to ensure that, with effect from the tax year 2010, individuals with an adjusted income level of **€400,000** or more (where the full restriction applies) would pay an effective rate of tax of approximately **30 per cent** on a combination of adjusted income and ring-fenced income. In addition, the adjusted income on which the restriction began to apply was reduced to €125,000. The 2010 report also showed that the objective of achieving an effective rate of approximately 30 per cent for individuals with an adjusted income of €400,000 or more was achieved.

This report relates to the use of specified reliefs by high-income individuals who were subject to the restriction in the tax year 2011. All other high-income individuals are subject to the normal tax rules. Composite details of the tax paid by all high-income individuals are available from the annual Statistical Reports published on the Revenue website www.revenue.ie.

The Finance Act 2011 implemented the Universal Social Charge (known as 'USC') which subsumed the Income Levy. The USC was charged on an individual's aggregate income from all sources (with no account taken of pension contributions, trading losses set against other income etc.) with rates applying on a progressive basis as follows – 2% on the first €10,036, 4% on the next €5,980 and 7% on the remainder. The amount of USC payable by an individual is not affected by the application of the limitation on the use of specified reliefs. Therefore, in order to examine whether or not the limitation is achieving its objective of ensuring that individuals with an adjusted income level of €400,000 or more would pay an effective tax rate of approximately 30 per cent the USC figure is excluded. However, to examine the amount of income tax being paid by these individuals, the USC figure is included. Throughout this report the tax figures and rates are exclusive of USC unless otherwise stated.

¹ *Adjusted income* is the taxable income of an individual before the restriction is applied, to which is added the amount of income sheltered in the year through the use of the specified reliefs. It excludes "ring-fenced income" (e.g. DIRT) which is normally liable to tax at specific rates regardless of the amounts involved or the marginal rate of tax at which the individual is liable.

Analysis of the application of the high-income individuals' restriction for the tax year 2011 shows that the objective of achieving an effective rate of tax of approximately 30 per cent for individuals with an adjusted income of €400,000 or more was achieved in that tax year. Where adjusted income was less than €400,000, a tapering approach ensured that there was a graduated application of the restriction, with the effective rate of tax increasing towards 30 per cent as adjusted income increased towards €400,000.

A brief summary of how the restriction operated for the tax year 2011, and the specified tax reliefs covered by the restriction, is included in **Annex 1**.

2. Results for 2011

A breakdown of the 2011 results showing the effect of the restriction in its fifth year of operation is set out in tabular form in **Annex 2**. These results are based on actual returns received.

A comparison of the outcome for 2011 with the outcome for 2007, 2008, 2009 and 2010 is set out below.

Year	Total Number of Individuals	Additional Tax €m
2011	1,143	63.60
2010	1,544	80.18
2009	452	38.86
2008	423	39.68
2007	439	39.99

The results for 2011 indicate that the overall number of individuals who were subject to the restriction was 1,143 and that the additional tax yield was €63.6m. Compared to 2010, this represents a decrease of 401 in the number of individuals and a decrease of €16.58m in the additional tax yield from the measure. These decreases result from two main factors:

1. The general economic downturn which has meant that a number of taxpayers have seen their income fall to levels at which they are no longer subject to the limitation, and
2. The changes introduced in Finance Act 2011 i.e. the reduction in the amount of income which can qualify from the artists exemption and the removal of the tax exemption for patent income

Cases where full restriction applies – Adjusted Income of €400,000 or more

Table 1A (Annex 2) shows that the 286 high-income individuals with an adjusted income of €400,000 or more (i.e. where the full restriction applied) paid an **average** effective tax rate of **30.67 per cent** on the combination of adjusted income and ring-fenced income.

This meets the objective set out for the measure. The additional tax involved was €40m, representing a 101.5% increase on the tax that would otherwise have been paid if the restriction had not applied. 35 individuals with adjusted income of €400,000 or more, who would not otherwise have paid income tax in 2011, were brought into the tax net for that year.

Table 1B (Annex 2) summarises the distribution of the effective tax rates for the 286 cases with adjusted income of €400,000 or more. It shows that the majority of high-income individuals within this category fall into the effective tax rate bands of 25% to 30% (59 cases) and 30% to 35% (226 cases). One individual fell into the effective rate band of greater than 40%.

These individuals paid on average 39.7 per cent tax inclusive of USC.

Cases where restriction partly applies – Adjusted Income of up to €400,000

Table 2A (Annex 2) shows that the 857 high-income individuals with an adjusted income of up to €400,000 (i.e. where the restriction applies on a graduated basis) paid an **average** effective tax rate of **19.21 per cent** on the combination of adjusted income and ring-fenced income. The additional tax involved was €23.6m, representing a 119% increase on the tax that would otherwise have been paid if the restriction had not applied. 174 individuals with adjusted income of up to €400,000, who would not otherwise have paid income tax in 2011, were brought into the tax net for that year.

Table 2B (Annex 2) summarises the distribution of the effective tax rates for the 857 cases with adjusted income of up to €400,000. The spread reflects the graduated nature of the application of the restriction for cases in this category. The fact that over 50% of these individuals had an effective tax rate of 20% or more reflects the fundamental changes made to the restriction in Finance Act 2010.

These individuals paid on average 28.8 per cent tax inclusive of USC.

3. Schedule of declared use of Reliefs

Table 3 (Annex 2), in relation to each specified relief, shows:

- the overall number of individuals subject to the restriction, who declared that they used the relief, and
- the total combined amount of the relief declared as used by those individuals.

Revenue Commissioners

[DATE]

ANNEX 1

Operation of the restriction in the tax year 2011

The restriction works by limiting the total amount of “specified reliefs” that a high-income individual can use to reduce his or her tax liability in any one tax year.

In the tax year 2011, the overall objective was to ensure that individuals with an adjusted income of **€400,000** or more would pay an effective rate of tax of **approximately 30 per cent** on a combination of adjusted income and ring-fenced income. A graduated application of the restriction below an adjusted income level of €400,000 would ensure that the effective rate of tax increased towards 30 per cent as adjusted income increased towards €400,000.

For the tax year 2011, the restriction applied to an individual where all of the following criteria applied:

- the Adjusted Income of the individual for the tax year was equal to or greater than an Income Threshold Amount which was, in general, **€125,000** but was less if the individual had ring-fenced income (e.g. deposit interest),
- the aggregate of specified reliefs used by the individual for the tax year was equal to or greater than a Relief Threshold Amount which was set at **€80,000**, and
- the aggregate of specified reliefs used by the individual for the tax year was greater than **20 per cent** of the individual’s adjusted income.

In the case of a married couple, application of the restriction to each spouse is determined separately. Therefore, in 2011, the restriction applied to each individual spouse only where the three circumstances mentioned above applied to that spouse for that tax year.

Specified Reliefs

Broadly speaking, the reliefs that are restricted include:

- the various sectoral and area-based property tax incentives,
- certain exemptions e.g. relating to artists’ income, woodlands etc.,
- certain investment incentive reliefs such as BES, EII relief and film relief,
- relief for interest paid on loans used to acquire an interest in a company or in a partnership.

Normal business-related expenses, deductions for capital allowances on plant and machinery, genuine business-related trading losses, and genuine losses from a rental activity that do not arise from the use of specified reliefs are not restricted. In addition, personal tax credits are not affected by the restriction.

² Certain items are deductible when arriving at adjusted income (e.g. pension contributions, certain rental capital allowances on plant and machinery, trading losses against other income etc.) that are not deductible against income on which USC is chargeable. These differences between what is deductible can give rise to taxpayers having effective USC inclusive tax rates on their adjusted income in excess of the top rate of tax plus the top rate of USC.
